# LCD MODULE 4x20 - 3.75mm

Issue 4.2013

## INCL. CONTROLLER SSD1803

*EA DIP203G-4NLED  
Dimension 68 x 27 mm*

*EA DIP203J-4NLW*

*EA DIP203B-4NLW  
Dimension 75 x 27 mm*

## FEATURES

- \* HIGH CONTRAST LCD SUPERTWIST DISPLAY
- \* CONTROLLER SSD1803 (NEARLY 100% COMPATIBLE WITH HD44780)
- \* INTERFACE FOR 4- AND 8-BIT DATA BUS
- \* SERIAL SPI INTERFACE (SID, SOD, SCLK)
- \* POWER SUPPLY +2.7 V ~ +3.45V / 1.5mA
- \* LED BACKLIGHT Y/G max. 150mA@+25°C
- \* LED BACKLIGHT BLUE-WHITE AND BLACK-WHITE max. 45mA@+25°C
- \* OPERATING TEMPERATURE RANGE -20..+70°C
- \* BUILT-IN TEMPERATURE COMPENSATION
- \* SOME MORE MODULES WITH SAME SIZE AND SAME PINOUT:
  - DOTMATRIX 1x8, 2x16
  - GRAPHIC 122x32
- \* NO SCREWS REQUIRED: SOLDER ONTO PCB ONLY
- \* DETACHABLE VIA 9-PIN SOCKET EA B200-9 (2 PCS REQUIRED)

## ORDERING INFORMATION

9	D2	H / L	Display Data	18	C	-	LED B/L-

## BACKLIGHT

Using the LED backlight requires a current source or external current-limiting resistor. Forward voltage for yellow/green backlight is 3.9~4.2V and for white LED backlight is 3.0~3.6V. Please take care of derating for  $T_a > +25^\circ\text{C}$ .

**Note:** Do never connect backlight directly to 5V; this may destroy backlight immediately !

## TABLE OF COMMAND (SSD1803, IE=HIGH)

Instruction	C ode										Description	Execute Time (270kHz)

- 2nd. line \$20..\$33
- 3rd. line \$40..\$53
- 4th. line \$60..\$73

**CHARACTER SET**

A full character set is built-in already. Additionally to that 8 more characters can be defined individually.

**CONTRAST ADJUSTMENT**

Pin 3 requires driving voltage for contrast VEE. Adjustment can be done by external potentiometer for example. The capacitor is for a better startup behaviour.

**Note:** In contrast to many other dotmatrix lcd modules input is supplied with VDD level here !

All versions do have a built-in temperature compensation; so there's no more need for contrast adjustment during operation anymore.

**CREATING YOUR OWN CHARACTERS**

All these character display modules got the feature to create 8 own characters (ASCII Codes 0..7) in addition to the 240 ROM fixed codes.

- 1.) The command "CG RAM Address Set" defines the ASCII code (Bit 3,4,5) and the dot line (Bit 0,1,2) of the new character. Example demonstrates creating ASCII code \$00.
- 2.) Doing 8 times the write command "Data Write" defines line by line the new character. 8th. byte stands for the cursor line.
- 3.) The newly defined character can be used as a "normal" ASCII code (0..7); use with "DD RAM Address Set" and "Data Write".

Set CG RAM Address				Character Grid	Data							
Adresse		Hex	Bit									
7	6	5	4		3	2	1	0	Hex			
0	1	0	0	0	0	0	0	0	0	0	0	\$04
				0	0	0	1	0	0	0	\$04	
				0	0	1	0	0	0	0	\$04	
				0	0	1	1	0	0	0	\$04	
				1	0	0	0	0	0	0	\$04	
				1	0	1	0	0	0	0	\$04	
				1	1	0	0	0	0	0	\$04	
				1	1	1	0	0	0	0	\$00	

## DRIVING WITH 5V-SYSTEMS

The supply voltage of the display is necessarily 3.3V. If a 5V-system is used, the level have to be adapted. For example you can use a bidirectional levelshifter (e.g. PS 74LVC4245A), like shown in the opposite figure.

## COMPATIBILITY WITH EA DIP204-4

The displays of EA DIP203 and EA DIP204 series are electrically and mechanically identical to each other running with 3.3V supply mode. Merely a 5V supply is not acceptable with the new EA DIP203 series.

*Note:*  
LC-Displays are generally not suited to wave or reflow soldering. Temperatures of over 80°C can cause lasting damage.

## EA DIP203G-4NLED

## EA DIP203B-4NLW and EA DIP203J-4NLW

## SERIAL MODE

Factory setting for interface is parallel with 4 bit or 8 bit data bus. Alternatively the module can be used with serial data stream. For that, solder link **SPI** has to be closed. Specification for serial operation mode is described in user manual for SSD1803:
