GENERAL NOTES

SIMCOM OFFERS THIS INFORMATION AS A SERVICE TO ITS CUSTOMERS, TO SUPPORT APPLICATION AND ENGINEERING EFFORTS THAT USE THE PRODUCTS DESIGNED BY SIMCOM. THE INFORMATION PROVIDED IS BASED UPON REQUIREMENTS SPECIFICALLY PROVIDED TO SIMCOM BY THE CUSTOMERS. SIMCOM HAS NOT UNDERTAKEN ANY INDEPENDENT SEARCH FOR ADDITIONAL RELEVANT INFORMATION, INCLUDING ANY INFORMATION THAT MAY BE IN THE CUSTOMER'S POSSESSION. FURTHERMORE, SYSTEM VALIDATION OF THIS PRODUCT DESIGNED BY SIMCOM WITHIN A LARGER ELECTRONIC SYSTEM REMAINS THE RESPONSIBILITY OF THE CUSTOMER OR THE CUSTOMER'S SYSTEM INTEGRATOR. ALL SPECIFICATIONS SUPPLIED HEREIN ARE SUBJECT TO CHANGE.

1 Document Overview

This document describes how to use GPIO supplied by SIMCOM **SIM7100 SIM7500 SIM7600** modules.
This document can be used for SIMCom **SIM7100 SIM7500 SIM7600** modules.

This document will depict the usage of GPIO functions supplied by SIMCom **SIM7100 SIM7500 SIM7600** module. User can get useful information about the SIMCom **SIM7100 SIM7500 SIM7600** Module's GPIO function quickly through this document.

Each GPIO can be used as:

- General Purpose Input/Output pin.
- Interrupt pin
- Special function pin.

2 GPIO Managed

2.1 GPIO supplied by Module

Currently the following pins can be used as a function on SIM7100:

PIN name	GPIO function	Function1	Function2	Default Function
GPIO_40	GPIO	PCM_MCLK		0
GPIO_41	GPIO	WAKEUP_HOST	SYS_APP	2
GPIO_42	GPIO	USIM_DET		0
GPIO_43	GPIO	WAKEUP_ME	SYS_APP	2
GPIO_44	GPIO	SD_DET		0
GPIO_40	GPIO	PCM_MCLK		0
GPIO_41	GPIO	WAKEUP_HOST	SYS_APP	2

Table 1 GPIO supplied by SIM7100

Currently the following pins can be used as a function on SIM7500/ SIM7600:

PIN name	GPIO function	Function1	Function2	Default Function
GPIO_40	GPIO	STATUS		1
GPIO_41	GPIO			0
GPIO_43	GPIO			0
GPIO_44	GPIO	SD_DET		0

Table 2 GPIO supplied by SIM7500/ SIM7600

2.2 GPIO AT Operations

Currently the following Functions can be used by special GPIO on SIM7X00 module,

1) AT+CGFUNC is used to set GPIO function.

Example1:

```
AT+CGFUNC=40, 1 //set gpio-40 to function 1
AT+CGFUNC=41, 2 //set gpio-41 to function 2.
```

2) AT+ CGDRT is used to configure GPIO pin as output/input, before must be set the GPIO to GPIO function.

3) AT+ CGSETV is used to set GPIO HIGH/LOW, before must be set the GPIO to GPIO function.

4) AT+ CGGETV is used to get GPIO HIGH/LOW, before must be set the GPIO to GPIO function.

AT+CGISR set interrupt trigger condition and start this interruption. When the interruption happened, the following URC will be sent to host
