High Input Voltage, Adjustable 3-Terminal Linear Regulator

Features

- ▶ 13.2 - 450V input voltage range
- ▶ Adjustable 1.20 - 440V output regulation
- ▶ 5% output voltage tolerance
- ▶ Output current limiting
- ▶ 10 μ A typical ADJ current
- ▶ Internal junction temperature limiting

Applications

- ▶ Off-line SMPS startup circuits
- ▶ Adjustable high voltage constant current source
- ▶ Industrial controls
- ▶ Motor controls
- ▶ Battery chargers
- ▶ Power supplies

General Description

The Supertex LR8 is a high voltage, low output current, adjustable linear regulator. It has a wide operating input voltage range of 13.2 - 450V. The output voltage can be adjusted from 1.20 - 440V provided that the input voltage is at least 12V greater than the output voltage. The output voltage can be adjusted by means of two external resistors R1 and R2 as shown in the typical application circuits. The LR8 regulates the voltage difference between VOUT and ADJ pins to a nominal value of 1.20V. The 1.20V is amplified by the external resistor ratio R1 and R2. An internal constant bias current of typically 10 μ A is connected to the ADJ pin. This increases V_{OUT} by a constant voltage of 10 μ A times R2.

The LR8 has current limiting and temperature limiting. The output current limit is typically 20mA and the minimum temperature limit is 125°C. An output short circuit current will therefore be limited to 20mA. When the junction temperature reaches its temperature limit, the output current and/or output voltage will decrease to keep the junction temperature from exceeding its temperature limit. For SMPS start-up circuit applications, the LR8 turns off when an external voltage greater than the output voltage of the LR8 is applied to VOUT of the LR8. To maintain stability, a bypass capacitor of 1.0 μ F or larger and a minimum DC output current of 500 μ A are required.

The device is available in TO-243AA (SOT-89), TO-252 (D-PAK), and TO-92 packages.

Typical Application Circuit

* Required for conditions where V_{IN} is less than V_{OUT}

Absolute Maximum Ratings

Parameter	Value
V_{IN} input voltage (voltagess ref to ADJ)	-0.5V to +480V
Output voltage range	-0.5V to +470V
Operating ambient temperature range	-40°C to +85°C
Operating junction temperature range	-40°C to +125°C
Storage temperature range	-65°C to +150°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
